

Coding & Solution

Date	1 July 2026
Team ID	
Project Name	AI Powered Debt Relief & Financial Recovery Platform (FinRelief AI)
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/vidyarayapati/FinRelief-AI.git
Programming Language(s)	Python, JavaScript, HTML5, CSS3
Framework(s) Used	React.js, FastAPI, SQLAlchemy ORM

Key Features Implemented	• User Registration & Login • Loan & Financial Profile Management • AI Financial Health Analysis • Settlement Prediction • AI Negotiation Letter Generation (Google Gemini AI) • Financial Dashboard & AI History
Pending / Incomplete Features	• Email notifications • Advanced reporting & analytics • Multi-language support (Future Enhancement)
Setup / Run Instructions	1. Install project dependencies. 2. Configure Google Gemini API key. 3. Start the FastAPI backend server. 4. Launch the React.js frontend. 5. Access the application through the local web browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The application follows a modular full-stack architecture with separate frontend, backend, AI processing, and database layers. It integrates **Google Gemini AI** to generate personalized debt settlement recommendations and negotiation letters while maintaining secure borrower data management using **FastAPI**, **SQLite**, and **SQLAlchemy ORM**. The solution is designed to be scalable, maintainable, and suitable for future cloud deployment.
