Project Title	AI Powered Debt Relief & Financial Recovery Platform (FinRelief AI)
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform loan approval using machine learning, boosting efficiency and accuracy. It tackles system inefficiencies, promising better operations, reduced risks, and happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	Develop an AI-powered platform that helps borrowers manage loans, analyze financial health, predict settlements, and generate AI-based negotiation strategies.
Scope	Build a web application using React.js, FastAPI, SQLite, and Google Gemini AI for loan management, financial analysis, settlement prediction, and negotiation support.
Problem Statement	
Description	Borrowers often struggle to manage multiple loans, assess financial health, and negotiate settlements due to limited guidance and manual processes.

Impact	The platform improves financial decision-making, reduces debt stress, and simplifies settlement through AI-powered recommendations.
Proposed Solution	
Approach	Use AI to analyze borrower data, predict settlements, and generate personalized negotiation strategies through a secure web platform.
Key Features	• Secure login and user management. • Loan and financial profile management. • AI settlement prediction. • AI negotiation letter generation. • Financial dashboard and analytics.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU	Intel Core i5/Ryzen 5 (4+ cores)
Memory	RAM	8 GB
Storage	Project files & database	256 GB SSD
Software		
Frameworks	Frontend & Backend	React.js, FastAPI

Libraries	Supporting libraries	SQLAlchemy ORM, Pydantic, Google Generative AI SDK
Development Environment	IDE	Visual Studio Code, PyCharm
Data		
Data	Borrower and loan records	SQLite Database
